## Cloudflare Domain Migration Checklist

---

Prepare Old Account

☐ Export DNS records - Cloudflare Dashboard → DNS → Export (CSV or BIND format)

☐ Document Page Rules

☐ Document Firewall Rules

☐ Document Workers

☐ Document SSL/TLS Settings

☐ Document Caching & Performance Settings

☐ Document Rate Limiting

☐ Document Email Routing (if used)

☐ Disable DNSSEC - DNS → DNSSEC → Disable

---

Migration the New Account (this step is the same regardless of where you are migrating from)

☐ Add domain to new Cloudflare account

☐ Use identical DNS records during setup.

☐ Update nameservers at domain registrar

☐ Set to the nameservers provided by the new account.

☐ Wait for DNS propagation - Check with tools like dig, whatsmydns.net, or nslookup.

---

Post-Migration Cleanup

☐ Verify domain is "Active" in new account

☐ Add Back Page Rules

☐ Add Back Firewall Rules

☐ Add Back Workers

☐ Caching, SSL, Rate Limits, etc.

☐ Re-enable DNSSEC (if previously used)

☐ Delete domain from old Cloudflare account
